

LAVANYA SAINI

lavanyasaini615@gmail.com | +91 7289923638 | Shahdara, Delhi | github.com/Lavan08-op | Portfolio

TECHNICAL SKILLS

Cybersecurity: Nmap, Burp Suite, CVE/NVD Analysis, VAPT, Metasploit, KEV, OSINT, Python Scripting, Flask

Web Development: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Node.js, Express.js, MongoDB, Tailwind CSS

Languages: Python, JavaScript, C

Tools: Git, GitHub, Vite, Kali Linux, Canva

PROJECTS

Vulnerability Scanner

Mar 2026 – Apr 2026

github.com/Lavan08-op/vulnerability-scanner

Python · Nmap · CVE/NVD · Metasploit · KEV · Flask

- Engineered a network vulnerability scanner in Python using Nmap, with dual-source CVE intelligence — offline database and live NVD API — for accurate host threat identification.
- Built CPE-based CVE matching engine with exploit correlation across Metasploit and CISA KEV, mapping each vulnerability to real-world exploitability and severity.
- Automated risk scoring and PDF report generation; built a Flask dashboard to display scan results, severity breakdowns, and remediation flags.

Cybersecurity Internship Projects — DecodeLabs

Jun 2026 – Present

github.com/Lavan08-op/DecodeLabs-Internship

Python · Cryptography · Security Scripting · Phishing Analysis

- Password Strength Checker: Python tool evaluating password strength using length heuristics, character variety scoring, leaked-password blocklist checks, and repeated-character pattern detection.
- Caesar Cipher Encryption Tool: Menu-driven encryption/decryption implementing Caesar cipher with input validation, logging, file save support, and brute-force demo illustrating key-space vulnerability.
- Phishing Awareness Analyser: Analysed phishing samples, documented red flags, built a non-expert triage checklist and decision tree; wrote a Python script scanning message text for phishing indicators.

RaceMind — F1 Race Strategy Simulator

Hackathon · Team Project

race-mind-omega.vercel.app | github.com/Lavan08-op/RaceMind

React 19 · TypeScript · Tailwind CSS · Vite · Recharts · OpenWeatherMap API

- Built a real-time F1 race strategy simulator in a hackathon team using React 19 + TypeScript; designed full frontend architecture — component structure, state flow, and UI layout for the race strategy dashboard.
- Integrated OpenWeatherMap API for live weather data feeding directly into tire degradation and lap time physics — affecting grip, wear rate, and compound recommendations in real-time.
- Developed 8 modular React components including live telemetry, Recharts visualizations, and a voice race engineer via Web Speech API with zero external audio dependencies.

Portfolio Website

Mar 2025

github.com/Lavan08-op/portfolio-web

HTML5 · CSS3 · JavaScript

- Built and deployed a personal portfolio from scratch using only HTML, CSS, and vanilla JS — no frameworks; publicly live and linked on GitHub as a working code sample.

EDUCATION

B.Tech, Information Technology — MAIT, Delhi

2024 – 2028

Senior Secondary (XII) — Science, CBSE · 88.00%

2023

Avinash Chandra Chadha Govt. Sarvodaya Bal Vidyalaya, Jhilmil Colony, Delhi

RELEVANT TRAINING

Ethical Hacking · CYBERMINDSPACE (Virtual)

Jan 2026 – Present

MERN Stack · MongoDB · Express · React

Sep 2025 – Present

Python · Google / YouTube

Jan 2022 – Present

EXTRACURRICULAR

- Competed in multiple hackathons; built functional prototypes under time pressure applying Python and full-stack web skills.
- Led college society team in organizing a competitive gaming event — handled team assignments, scheduling, and on-day coordination.
